Your niche — don't compete broadly: **Clinical Data Analyst** **Health Systems Analyst** **Research Data Analyst** **Healthcare BI Analyst**

// FOUR PHASES • 24 WEEKS • 55 DELIVERABLES

Audit & Recalibrate

Phase 01 • Wk 1-2

Know exactly where you stand before moving an inch forward

0%

Before studying anything, you need a sharp picture of your actual gap — not the assumed one. Most career-switchers over-study things they already know and ignore real blockers. These two weeks surface exactly what to focus on in Phase 2 and stop you wasting scarce time.

✓ DELIVERABLES

- ☐ Complete the free SQL skills diagnostic on StrataScratch — record your exact score
- ☐ Complete a Python / pandas assessment on DataCamp (free tier) — note your weak spots

- ☐ Write out every technical project completed since MSc: LFT simulation, Streamlit app, R Shiny DSS, procurement dashboard, Pine Script indicators
- ☐ Find 3 remote healthcare data analyst job postings on LinkedIn that excite you
- ☐ Extract the top 10 hard skills listed across those 3 postings
- ☐ Map your honest gap — match skills required vs. skills evidenced — in writing
- ☐ Block recurring learning slots in your calendar: 6–7:30 am daily, 30-min lunch, 1.5 hrs evening

FREE RESOURCES

StrataScratch — Skills Assessment

DataCamp — Free Tier

LinkedIn Jobs — Remote Healthcare Data

Indeed — Remote Analyst Roles

Phase 02 • Wk 3–10

Core Skills Consolidation

SQL · Python · Power BI · Statistics

0% 

Phase 03 • Wk 8–18

Portfolio Reconstruction

3 Projects · GitHub · Personal Portfolio Site

0% 

Phase 04 • Wk 14–24

Job Market Entry

Resume · Applications · Networking

0% 

6-Month Milestone Targets

JULY 2026

SQL fundamentals complete · GitHub profile set up · LFT simulation (Project 1) polished and pushed publicly

AUGUST 2026

Python/pandas confidence restored · Power BI basics complete · Procurement dashboard rebuilt in Python (Project 2 started)

SEPTEMBER 2026

OCTOBER 2026

Project 2 complete on GitHub · LinkedIn thought leadership series active · 2 posts per month published

MIMIC-IV readmission project (Project 3) complete · GitHub Pages portfolio site live · CV and LinkedIn fully optimised

NOVEMBER 2026

Actively applying 3–5 targeted roles per week · Application tracker running · Networking with global health organisations

DECEMBER 2026

First interviews scheduled · First remote offer in sight · Remote healthcare data analyst role within reach

Productivity Hacks for a 9–5 Professional

The Night-Before 10-Minute Plan

Every evening, write 3 specific tasks for tomorrow's session. Not "practice Python" — but "Complete Kaggle pandas lesson 4 and redo the groupby exercise." Decision fatigue is the silent killer of morning productivity.

Protect 6–7:30am Like a Boardroom Meeting

This is your most important learning window. No WhatsApp, no email, no news. Think of it as a standing appointment with the version of you who has the remote job — he's waiting.

Lunch Break = SQL Practice

30 minutes of StrataScratch or SQLZoo every lunch. Consistent 30-minute daily sessions over 6 weeks will outperform sporadic 3-hour weekend cramming every single time.

The Friday Commit Rule

Every Friday evening, push something to GitHub — even a half-finished notebook. Public commit history shows recruiters a pattern of consistent, real work. One month of Fridays already beats most applicants.

Batch Job Applications — Saturday Morning Only

Block 1.5 hours every Saturday morning exclusively for job search: research roles, tailor CVs, write cover letters, send applications. Batching stops the anxiety bleeding into study time.

Your Preprint Is a Door Opener

When reaching out to hiring managers on LinkedIn, reference your Research Square preprint and your Streamlit app. Not everyone applying for healthcare analytics roles has published research in the field. You do.
